

PHYSICS Complementary Astronomy

203-BWT-03
Fall 2017

Teachers Rim Dib 7B.19, local 4153, rdi b@dawsoncollege.qc.ca

Pre-requisites None

Co-requisites None

Ponderation 3-0-3 (3 hours of lecture and 3 hours of work outside class per week)

Course objectives The objective of this course is to enable students to understand the general nature of current issues in science and technology and to explain some of these issues. To this end, students should learn how to characterize typical scientific thought processes and methods, illustrate how science and technology are complementary, explain the context and stages involved in some scientific and technological discoveries, and to deduce various consequences and questions arising from certain recent scientific and technological developments.

Course competencies At the conclusion of the course, each student will be able to produce a 750-word paper giving a written commentary presenting a scientific discovery or technological breakthrough. This commentary would give a brief explanation of the characteristics essential to scientific thinking, enumerate and briefly describe those of each major step in typical scientific process. It would contain definitions of the terms used and a description of the major relationships and logical and temporal links between science and technology. This commentary would also give a pertinent and coherent correlation of various scientific and technological discoveries and the surrounding context, enumerating the major steps involved in the discoveries. Finally, it would describe briefly the major consequences and challenges currently arising from these discoveries, and formulate pertinent and plausible elements of responses to them.

Evaluation The Institutional Student Evaluation Policy (ISEP) is designed to promote equitable and effective evaluation of student learning and is therefore a crucial policy to read and understand. The policy describes the rights and obligations of students, faculty, departments, programs, and the College administration with regard to evaluation in all your courses, including grade reviews and resolution of academic grievance. ISEP is available on the Dawson website.

Quizzes	60%
Course work and homework ^y	25%
Term project	15%

^yYour teacher will provide a detailed breakdown of these components during the first week of class.

Important Notes:

At the end of every episode (approx. 2 weeks) there will be a quiz on the material in that episode. Dates for the quizzes will be announced at least one class in advance.

On a regular basis, students will be asked to complete small in-class or homework assignments and activities.

The due dates for the term project (including elements that may be required before the final project is due) will be specified by your teacher in the first full week of classes.

Course work not submitted by the due date may be penalized at the teacher's discretion.

In order to pass the course an average grade of 60% is required, calculated according to the evaluation scheme above.

Required materials Calculator Sharp EL-501 XGB-WH (the one available at the bookstore) or any other scientific calculator approved by your teacher.
There is **no required textbook** for this course

Teaching methods

The material will be presented using a mix of active learning activities, lectures, in-class problem solving, laboratory experiments and demonstrations. Laboratory periods will be used for experiments as well as class tests and lectures.

Attendance & participation

Although class attendance is not compulsory, students should make every effort to attend all classes. In the event that a class is missed, the student is responsible for all material covered or assigned during that class. **Attendance during laboratory experiments and for class tests is however compulsory.** In the rare event that a student for valid reason (*e.g.* due to an intensive course, illness, *etc.*) is or anticipates to be absent during a laboratory experiment or for a class test, the student **must**, where possible, inform the teacher and provide the necessary documents before the absence or, at the latest, on the day of their return. If the absence is excused, students will have the opportunity to complete the assessment.

All other assessments (readings, quizzes, lab activities, *etc.*) missed due to absence are:

assigned a grade of zero where the absence is not excused;

given zero weight in the calculation of the final grade where the absence is excused.

For additional information regarding attendance, students should refer to the Institutional Student Evaluation Policy (ISEP section IV-C).

Literacy standards

It is expected that students will be able to comprehend the course material and express themselves appropriately as a normal part of their academic performance in the course. Marks may be deducted for inadequate communication skills.

Laboratory work

Experimentation is an essential part of science. Students will be expected to perform experiments and report on their results. Your teacher will provide you with instructions for lab experiments and activities (there is no manual to purchase). **Students must be present during the entire lab activity to receive credit.**

Student conduct

Everyone has the right to a safe and non-violent environment. Students are obliged to conduct themselves as stated in the Student Code of Conduct and in the ISEP section on the roles and responsibilities of students (ISEP section II-D). Disruptions or excessive noise will not be tolerated. Students who do not comply with these rules will be asked to leave the class and may be referred to Student's Services for disciplinary action. **Mutual respect is the key to a harmonious learning environment.**

Academic integrity

Cheating, copying, or any other form of academic dishonesty will not be tolerated. Students should acquaint themselves with the policy of the College on plagiarism and cheating. According to ISEP, the teacher is required to report to the Sector De86(th89a6(themsid4o(th89a6(thehe)-4.f(th89ted.)es)-3Tred)-346(pl inndansothelhe87(c)28(fheattre)48a7(will)4317(b)-28(ad)8han1384(zero)4830(fot)]TJ 0 -11.956 Td 7(the)1423iearofeworftth1423(parln)1(e)-1or Fm50eareatla(t.)-843(Y)84(our)1383(teac7(hln)1(e)-rof)-333ia6(th1421(erf))-1(m)-430(y)28(ou)1317(of)-338(an

**Course
content**

This course is modular, divided into episodes that can last 1-4 weeks depending on topic complexity and class interest. There will be a quiz at the end of each episode. The following topics can be covered in class:

Intro: The scale of things. The Universe is HUGE. What does it mean to think like a scientist?
Backyard astronomy: A tour of what you can observe and basic observation techniques. Become a proper amateur astronomer.
Evolution of astronomy: from the Greek astronomers to the Heliocentric revolution of the Renaissance.
Gravity: Orbits, Tides, and Rocket Science!
Motion of the Earth: Time, Seasons and Eclipses.
Anatomy of our Solar System: The Sun and the Planets.
The nature of light, and how it can be used to study the Stars.
To the stars, part I: The Star Detective. What can we learn from a dot of light?
To the stars, part II: The evolution of stars, from birth to death, black holes, and the search of extrasolar planets.
Galaxies: The Milky Way and beyond.
Cosmology: From the Big Bang to the End of Time.

While there is no laboratory component in this course, experimental verification of physical reality is a key aspect of science and as such some class activities will occasionally involve experimental measurements and the analysis of data collected in the class or acquired from film clips. No lab reports will be required for this course. There is also the possibility of a field trip to the Planetarium, and an evening observation session with a telescope.

**Questions
outside class**

All regular day program teachers will be available in their respective offices to their students during posted office hours. In the first week, your teacher will inform you of their schedule and will post it outside their office.
Room 7A.1 is the physics study room. At scheduled times, a teacher or peer tutor will be on duty there to answer your questions. The schedule of teachers and peer tutors will be posted outside of 7A.1 in the 2nd or 3rd week of term.
